Dear Jamshid – TRUE Engineering

Letter of Recommendation

TRUE Engineering were contracted by Steer for the Early Scoping, Diagnostic and Preliminary Project Definition in Urban Transport in the City of Tashkent study which was commissioned by the International Finance Corporation (IFC) part of the World Bank Group. The purpose of the study was to conduct urban transport sector diagnostic and project screening in city of Tashkent and its agglomeration and propose business models appropriate for enabling and enhancing conditions for private sector participation and investment.

TRUE Engineering's role involved researching the local urban transport context and identifying potential investment opportunities for the IFC and the private sector. TRUE conducted this through stakeholder consultation, review of policies and regulation and public media announcements.

TRUE Engineering also provided English to Russian translation services.

TRUE Engineering were professional, organised and responded quickly to requests.

Yours sincerely

Andrew McClune
Associate Director
